Grinders

BUNN G3 Grinder – Troubleshooting

Problem	Possible Cause	Solution
The grinder will not turn on	The grinder is not plugged in	Plug in the grinder
	Bag switch is not depressed	Make sure bag switch behind spout is depressed during use
	The circuit breaker is tripped	Reset the circuit breaker. (See Checking Circuit Breakers in the Introduction section of this manual).
The grinder runs but no coffee comes out of the spout	The burrs and the discharge tube are clogged	Report to facilities
The grind is too coarse, too fine or inconsistent	The grinder is out of adjustment	Report to facilities
The grinder makes high-pitched or unusual noises while grinding	There is a foreign object in the burrs	Report to facilities
	The grind is set too fine and the burrs are touching	Report to facilities
The grinder turns on, but the burrs do not move and no coffee is ground	There is a foreign object in the burrs	Clean the burrs and remove the object
	The grind is set too fine and the burrs are locked together	Report to facilities

Grinders

Grinder Calibration Card

The Grinder Calibration Card is a laminated card used to calibrate grinder settings. This should be hung inside the FOH cabinet near the brewing station.

Grinders

Grinder Calibration Card

1. **Set grinder to medium drip setting:**
   - **Mahlkonig:** #7
   - **Ditting:** #7
   - **Bunn G3:** Drip
2. **Using a coffee scoop, grind approximately half a scoop of coffee beans**
3. **Spread the grounds in the box below and compare to the picture on the right. Alternatively, use the physical grind sample in your store to check for calibration.**
4. **If the ground coffee matches the picture, no calibration is required. If grind size does not match, report to Facilities.**

Place Grounds Here	

Note:

- The grind sample on this card is for calibration purposes only. Choose appropriate grind setting for different brewers available in your store.
